

Information Security (InfoSec)

Since the creation of computer viruses and antivirus software to the exponentially increasing threats from connected computers and Internet of Things (IoT) devices, the Information Security (InfoSec) industry has never been more important to the world and how it does business.

During this time, InfoSec has grown from a small niche part of information technology solutions to a robust industry with a large network of cybersecurity-specific companies and technology.

For the last 25 years, Polsinelli has represented and continues to represent many of the key players in the InfoSec industry and has played an integral part in its development and growth. The team has represented some of the largest InfoSec solutions integrators, as well as providers of network security management solutions, innovative biometric systems, the latest data de-identification and encryption solutions and Governance, Risk and Compliance (GRC) systems.

We regularly advise on issues involving financing for startups to complex mergers and acquisitions. Our lawyers have assisted with the protection of intellectual property in addition to counseling on industry-specific issues around security/forensic reporting, PCI auditor requirements and U.S. Department of Defense government contracting.

Polsinelli's multidisciplinary team provides comprehensive counsel to InfoSec companies and clients looking for a law firm with a higher level of InfoSec experience.
